

Eight reasons why EVOS™ Ci 33L is the perfect package for your business.

Innovative protective guard

The specially engineered guard protects the valve against accidental bumps and falls, and the churning knob and ergonomic arm grips enable safer handling.

Safety interlock system

You can lock the lever in the closed position to stop the valve from opening accidentally – during transportation, for instance.

Live content indication

The time-saving, live content gauge allows you to read the pressure at a glance – without needing to connect a regulator.

Quick action lever

The quick and simple open/close mechanism is easy to use – even when wearing gloves – and makes the valve leak-tight in a single action.

300-bar working pressure

The higher working pressure increases capacity so you need fewer cylinders, fewer change-outs and fewer deliveries.

Compact design

The EVOS Ci 33L contains almost the same volume of gas as a 200 bar 50l cylinder but is smaller, lighter and easier to handle.

Improved safety

A shorter, wide-diameter cylinder offers greater stability, and the colour contrast lever/valve body allows you to see whether the valve is open or closed from virtually any angle.

Zero gas wasted

You can manage your holdings more efficiently and avoid returning underused cylinders.
